Hi Tom – The last annual groundwater sampling event was conducted in 2018, completing the groundwater remedial investigation phase of this project. Future groundwater and surface water sampling will be conducted as part of the OU2 remedial action which we anticipate will begin during the Spring of 2021. These groundwater and surface water monitoring requirements are detailed in the Final Remedial Design Report for OU2, and can be found in the Interim Groundwater Monitoring section of the report (attached). Subsequent to completion of the OU2 remedial action, groundwater and surface water monitoring at the site will continue under the long-term groundwater and surface water monitoring plan to be developed in accordance with the remedy selected in the OU3 Record of Decision, dated September 29, 2020. If you have further questions concerning this matter, please contact me today as I will be on vacation until Thursday, November 12th.

Joe

Subject: 2019 and 2020 Sampling Results

Hello Pat and Joe,

I was wondering where I could find the 2019 annual sampling data for the Ringwood Mines Superfund Site. Also, when should we expect the 2020 results?

Regards,
Thomas Conway
